

Contents

Special Topic:

Tree-based methods for regression and classification – Statistical methods at the interface of graphics and statistics

Guest editors: Mark Stemmler & Alexander von Eye

- 363 Editorial
Mark Stemmler & Alexander von Eye
- 365 Identification of confounded subgroups using linear model-based recursive partitioning
Michael P. van Wie, Xintong Li & Wolfgang Wiedermann
- 389 Regression trees and random forests as alternatives to classical regression modeling: Investigating the risk factors for corporal punishment
Markus Fritsch, Harry Haupt, Friedrich Lösel & Mark Stemmler
- 419 Analyzing tree structures with Configural Frequency Analysis and the R-package confreq
Mark Stemmler, Jörg-Henrik Heine & Susanne Wallner
- 435 Log-linear and configural analysis of tree structures
Alexander von Eye, Wolfgang Wiedermann & Stefan von Weber
- 453 Using tree-based regression to examine factors related to math ability among 15-year old students
Cody Ding & Yuyang Zhao
- 471 Predicting post-experiment fatigue among healthy young adults: Random forest regression analysis
Eun-Young Mun & Feng Geng
